gfi.com/oneconnect

With all the challenges facing business emails, you need a platform that offers wide ranging protection.

A platform that can not only protect your users from spam and malware, but also archives all your company email and acts as an Exchange server failover in case of unexpected downtime. A platform like GFI OneConnect can do all that!

GFI OneConnect delivers:

- Effective spam and malware filtering for maximum protection
- Email archiving to reduce Exchange server storage requirements and ensure email retention compliance
- Complete email failover system for when you need it most.

Business spam filtering

GFI OneConnect delivers world-class spam detection designed to protect businesses and their users. Multiple spam filters achieve the maximum possible capture rate before they even hit the inbox.

By using a combination of Sender Policy Framework (SPF), SURBL's, RBL's Bayesian analysis and other technologies, you can expect over 99% effectiveness with very few false positives.

Malware protection

By using up to two antivirus engines and advanced malware scanners, GFI OneConnect keeps inboxes safe. Automatic scanning, live updates, active protection and effective email scanning combine to keep your business and your users safe from harm.

By using a combination of multiple antivirus engines, GFI OneConnect offers broader virus coverage than any other solution with a single AV.

Email Archiving

GFI OneConnect has also a powerful archiving functionality so that your users won't need to worry about their Exchange storage limits as everything is stored securely and managed by GFI OneConnect. With its enterprise searching capabilities IT administrators and users can quickly find items in the store and search through terabytes of data in a very short time.

Email continuity

Aside from spam, malware and antivirus, GFI OneConnect also acts as backup for your primary secure email server and can take over the minute you turn it on. A seamless transition ensures your users will hardly notice the difference and can remain productive even during the outage. Sending and receiving emails will continue as normal.

Once the primary server is back up, GFI OneConnect will synchronize with it and business resumes as if no downtime occurred. All with the flick of a virtual switch.

Delivered through the cloud, GFI OneConnect works in the background and is there when you need it most. It is a very cost-efficient solution and should be an integral part of your disaster recovery strategy.

Try GFI OneConnect at no cost! Download your fully functional 30-day trial complete with GFI technical support.
